CASE STUDY | RESTAURANT AND LOUNGE POWERED BY RANE COMMERCIAL'S ZONETECH, CALGARY, ALBERTA

Mister Chen's is a hip, lively restaurant and lounge serving craft cocktails and innovative Asian cuisine inspired by Asian flavors in a fun and ultramodern setting. At the heart of the fully integrated audio system is the Rane Zonetech.

The Rane Zonetech forms an integral component of the audio system for the entire restaurant - including the DJ booth, main restaurant area, lounge and the world class private dining room with an exclusive menu, cutting edge visual elements and dedicated staff.

The restaurant features a mixture of speakers - both in-ceiling and an Alto Professional TS215S to cover the low end. The overall management of the audio is controlled via the DR6 7" color screen situated under the DJ booth. The fully integrated solution allows full, simplified control for the restaurant staff to select and allocate sound sources throughout the restaurant, all in an easy-to-use elegant signal management solution. Additionally, the private room features it's own dedicated control courtesy of Rane Commercial DRZH featuring source selection and level control via an elegant single knob, a sleek black glass design and an integrated OLED display.

"As an integrator, I found the Zonetech extremely user friendly and intuitive. One of the features that makes it

About Rane

Since 1981 musicians, DJs, contractors and integrators have chosen Rane Corporation (rane.com) as an established innovator in problem-solving pro audio tools, affordably priced with unequalled reliability and customer service. Based in Mukilteo, WA, all products are designed and engineered exclusively in the United States from imported and domestic parts with worldwide product distribution.

amazing for integrating in a small/medium space is the functionality of the Parametric EQ being available on the INPUT and the OUTPUT of each of the channels. With this feature, you can do without an additional audio processor on the install. The end result, with the added touchscreen DR6 controller, is a simple setup that doesn't require the customer to take part in extensive education sessions, resulting in fewer call backs. I look forward to installing many more Zonetech's in the future."
